Subject Index

Absorbance
The excited states of covalently linked dimeric porphyrins I: The excited singlet states, 253
N^{α}-Acetyl-L-lysine
Photoexchange products of cytosine and 5-methylcytosine with N^{α}-acetyl-L-lysine and L-lysine, 265
Action spectrum
The dose-response relationship for tumourigenesis by UV radiation in the region 311 - 312 nm, 179
Aggregates
Light-induced transformations of hematoporphyrin diacetate and hematoporphyrin, 373
Avena
The molecular topography of phytochrome: chromophore and apoprotein, 43

Bathorhodopsin
The photoreaction of vacuum-dried rhodopsin at low temperature: evidence for charge stabilizaton by water, 417
Bilatrienes
Studies on biliprotein model compounds: cars, picosecond time-resolved absorption and emission spectroscopy of a tryptophan-substituted 2,3-dihydrobilatriene, 233
Biliprotein
Studies on biliprotein model compounds: cars, picosecond time-resolved absorption and emission spectroscopy of a tryptophan-substituted 2,3-dihydrobilatriene, 233
Binding
Binding of $Ru(bpy)_3^{2+}$ and $Ru(phen)_3^{2+}$ to polynucleotides and DNA: effect of added salts on the absorption and luminescence properties, 67
Biporphyrins
The excited states of covalently linked dimeric porphyrins I: The excited singlet states, 253
Blue light
Time characteristics of the interaction between phytochrome and the blue light photoreceptor system in *Mougeotia*, 467
Blue light effects
Blue light induces circadian rhythms in the *bd* mutant of neurospora: double mutants *bd,wc*-1 and *bd,wc*-2 are blind, 59

Ca^{2+}
Phototaxis of *Euglena gracilis* at low external calcium concentration, 443
Candida phototoxicity test
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109
Carcinogenesis
Photoimmunology: the mechanisms involved in immune modulation by UV radiation, 149
CARS
Studies on biliprotein model compounds: cars, picosecond time-resolved absorption and emission spectroscopy of a tryptophan-substituted 2,3-dihydrobilatriene, 233
Cellular recovery
Recovery of Chinese hamster cells following photosensitization by zinc tetrahydroxyphthalocyanine, 243
Chemiluminescence
The mechanism of enzymically induced chemiluminescence reactions of lucigenin, 91
Chinese hamster cells
Recovery of Chinese hamster cells following photosensitization by zinc tetrahydroxyphthalocyanine, 243

© Elsevier Sequoia/Printed in The Netherlands

Chloroplast movement
Time characteristics of the interaction between phytochrome and the blue light photoreceptor system in *Mougeotia*, 467
Circadian rhythms
Blue light induces circadian rhythms in the *bd* mutant of neurospora: double mutants *bd,wc*-1 and *bd,wc*-2 are blind, 59
Circular dichroism fluorescence
Relative affinity of 5-methoxypsoralen and 8-methoxypsoralen towards β-cyclodextrin: a fluorescence, circular dichroism and chromatographic study, 455
Circular DNA
Effect of UV irradiation at defined wavelengths on the tertiary structure of double-stranded covalently closed circular DNA, 491
Conformation change
The molecular topography of phytochrome: chromophore and apoprotein, 43
Contact hypersensitivity
Photoimmunology: the mechanisms involved in immune modulation by UV radiation, 149
Cryptochrome
Time characteristics of the interaction between phytochrome and the blue light photoreceptor system in *Mougeotia*, 467
Cryptomonas
Photo-orientation in a freshwater *Cryptomonas* species, 123
Cryptophyceae
Photo-orientation in a freshwater *Cryptomonas* species, 123
β-Cyclodextrin
Relative affinity of 5-methoxypsoralen and 8-methoxypsoralen towards β-cyclodextrin: a fluorescence, circular dichroism and chromatographic study, 455
Cytochrome *c*
Photoexcitation of the methionine–iron bond in iron(III) cytochrome *c*: bimolecular reaction with NADH, 341
Cytokines
Photoimmunology: the mechanisms involved in immune modulation by UV radiation, 149
Cytosine
Photoexchange products of cytosine and 5-methylcytosine with N^{α}-acetyl-L-lysine and L-lysine, 265

Dark effect
Characterization of new furocoumarin derivatives by their dark and light-mediated action on RNA bacteriophage MS2, 209
2′-Deoxyadenosine photoproducts
A new class of psoralen photoadducts to DNA components: isolation and characterization of 8-MOP adducts to the osidic moiety of 2′-deoxyadenosine, 321
Diaphototaxis
Photo-orientation in a freshwater *Cryptomonas* species, 123
Dications
The excited states of covalently linked dimeric porphyrins I: The excited singlet states, 253
Difference spectroscopy
The photoreaction of vacuum-dried rhodopsin at low temperature: evidence for charge stabilization by water, 417
DNA
Binding of $Ru(bpy)_3^{2+}$ and $Ru(phen)_3^{2+}$ to polynucleotides and DNA: effect of added salts on the absorption and luminescence properties, 67
DNA
Pyrrolocoumarin derivatives: DNA-binding properties, 435
DNA damage
Effect of UV irradiation at defined wavelengths on the tertiary structure of double-stranded covalently closed circular DNA, 491
DNA photosensitization
A new class of psoralen photoadducts to DNA components: isolation and characterization of 8-MOP adducts to the osidic moiety of 2′-deoxyadenosine, 321
DNA reactions
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109

DNA repair
Repair of the two *cis–syn* diastereoisomers formed between 3-carbethoxypsoralen and thymidine in yeast cells, followed by a chemical method, 389
Dose response
The dose-response relationship for tumourigenesis by UV radiation in the region 311 - 312 nm, 179
Dynamic processes
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295

Electron acceptors
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Electron transfer
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Electrophoretic mobility
Effect of UV irradiation at defined wavelengths on the tertiary structure of double-stranded covalently closed circular DNA, 491
Energy conversion
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Energy storage
The photoreaction of vacuum-dried rhodopsin at low temperature: evidence for charge stabilization by water, 417
EPR techniques
Influence of medium polarity on the photosensitizing properties of hematoporphyrin and hematoporphyrin derivative (Photofrin II), 365
Erythrocytes
Light-induced redistribution and photobleaching of protoporphyrin in erythrocytes from patients with erythropoietic protoporphyria: an explanation of the rapid fading of fluorocytes, 33
Erythropoietic protoporphyria
Light-induced redistribution and photobleaching of protoporphyrin in erythrocytes from patients with erythropoietic protoporphyria: an explanation of the rapid fading of fluorocytes, 33
Escherichia coli
Photoreactivation in *phr* mutants of *Escherichia coli* K-12: cloning from the *gal-att*λ interval increases the photoreactivable response in *phrA* strains, 21
Euglena
Phototaxis of *Euglena gracilis* at low external calcium concentration, 443

Fluorescence
Fluorescence of hematoporphyrin in living cells and in solution, 195
The excited states of covalently linked dimeric porphyrins I: The excited singlet states, 253
The nature of the chromophore responsible for naturally occurring fluorescence in mouse skin, 313
Fluorescence decay measurement
Fluorescence of hematoporphyrin living cells and in solution, 195
Fluorescence excitation
The excited states of covalently linked dimeric porphyrins I: The excited singlet states, 253
Fluorescence fading
Light-induced redistribution and photobleaching of protoporphyrin in erythrocytes from patients with erythropoietic protoporphyria: an explanation of the rapid fading of fluorocytes, 33
Fluorescence lifetimes
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Fluorescence microscopy
Fluorescence of hematoporphyrin in living cells and in solution, 195
Fluorescence quantum yields
The excited states of covalently linked dimeric porphyrins I: The excited singlet states, 253
Fluorescence spectroscopy
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295

Fluorescence staining
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Fluorescent biomolecules
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Free radicals
Photoexcitation of the methionine–iron bond in iron(III) cytochrome *c*: bimolecular reaction with NADH, 341
Photo-orientation in a freshwater *Cryptomonas* species, 123
Frequency-domain fluorometry
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295
Function
The molecular topography of phytochrome: chromophore and apoprotein, 43

Globin
Light-induced redistribution and photobleaching of protoporphyrin in erythrocytes from patients with erythropoietic protoporphyria: an explanation of the rapid fading of fluorocytes, 33
Grana
Spectroscopic analysis of chlorophyll photobleaching in spinach thylakoids, grana and light-harvesting chlorophyll *a*/*b* protein complex, 483

Harmonic-content fluorometry
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295
Hematoporphyrin
Fluorescence of hematoporphyrin in living cells and in solution, 195
Influence of medium polarity on the photosensitizing properties of hematoporphyrin and hematoporphyrin derivative (Photofrin II), 365
Influence of the gel–liquid phase transition on hematoporphyrin triplet deactivation in liposomes, 475
Light-induced transformations of hematoporphyrin diacetate and hematoporphyrin, 373
Hematoporphyrin derivative
Hematoporphyrin derivative photosensitization and cellular fluorescent photoproduct formation, 503
Hematoporphyrin diacetate
Light-induced transformations of hematoporphyrin diacetate and hematoporphyrin, 373
Human skin fibroblasts
Analysis of a photosensitive lesion induced by sunlamp UV > 315 nm exposure of 254-nm-irradiated human cells, 381
Hyperthermia
Hematoporphyrin derivative photosensitization and cellular fluorescent photoproduct formation, 503
Hypocrellin
Effect of hypocrellin A sensitization on the lateral mobility of cell membrane proteins, 395

Immune modulation
Photoimmunology: the mechanisms involved in immune modulation by UV radiation, 149
Intercalation
Binding of $Ru(bpy)_3^{2+}$ and $Ru(phen)_3^{2+}$ to polynucleotides and DNA: effect of added salts on the absorption and luminescence properties, 67
Intracellular fluorescence
Intracellular distribution of photosensitizing porphyrins measured by video-enhanced fluorescence microscopy, 355
In vivo
The nature of the chromophore responsible for naturally occurring fluorescence in mouse skin, 313

Laser flash photolysis
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109

Lasers
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295
Lateral mobility
Effect of hypocrellin A sensitization on the lateral mobility of cell membrane proteins, 395
Light absorption
Spectroscopic analysis of chlorophyll photobleaching in spinach thylakoids, grana and light-harvesting chlorophyll *a*/*b* protein complex, 483
Light-harvesting chlorophyll *a*/*b* complex
Spectroscopic analysis of chlorophyll photobleaching in spinach thylakoids, grana and light-harvesting chlorophyll *a*/*b* protein complex, 483
Liposomes
Influence of the gel–liquid phase transition on hematoporphyrin triplet deactivation in liposomes, 475
Lucigenin
The mechanism of enzymically induced chemiluminescence reactions of lucigenin, 91
Luminescence
Binding of $Ru(bpy)_3^{2+}$ and $Ru(phen)_3^{2+}$ to polynucleotides and DNA: effect of added salts on the absorption and luminescence properties, 67
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295
L-Lysine
Photoexchange products of cytosine and 5-methylcytosine with N^{α}-acetyl-L-lysine and L-lysine, 265

Membrane proteins
Effect of hypocrellin A sensitization on the lateral mobility of cell membrane proteins, 395
5-Methylcytosine
Photoexchange products of cytosine and 5-methylcytosine with N^{α}-acetyl-L-lysine and L-lysine, 265

Microoptic devices
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Microscopic imaging
Intracellular distribution of photosensitizing porphyrins measured by video-enhanced fluorescence microscopy, 355
Mougeotia
Time characteristics of the interaction between phytochrome and the blue light photoreceptor system in *Mougeotia*, 467

NADH
Photoexcitation of the methionine–iron bond in iron(III) cytochrome *c*: bimolecular reaction with NADH, 341
Nanosecond laser photolysis
Influence of the gel–liquid phase transition on hematoporphyrin triplet deactivation in liposomes, 475
Neurospora crassa
Blue light induces circadian rhythms in the *bd* mutant of neurospora: double mutants *bd*,*wc*-1 and *bd*,*wc*-2 are blind, 59

Oat
The molecular topography of phytochrome: chromophore and apoprotein, 43
Osidic photoadduct
A new class of psoralen photoadducts to DNA components: isolation and characterization of 8-MOP adducts to the osidic moiety of 2′-deoxyadenosine, 321
Oxygen evolution
Properties of a photosystem II preparation in a photoelectrochemical cell, 221

Phase transition
Influence of the gel–liquid phase transition on hematoporphyrin triplet deactivation in liposomes, 475
Pheophorbide *a*
The nature of the chromophore responsible for naturally occurring fluorescence in mouse skin, 313

Pheophytin *a*
The nature of the chromophore responsible for naturally occurring fluorescence in mouse skin, 313
Photoadducts
Repair of the two *cis–syn* diastereoisomers formed between 3-carbethoxypsoralen and thymidine in yeast cells, followed by a chemical method, 389
Photobinding
Pyrrolocoumarin derivatives: DNA-binding properties, 435
Photobleaching
Intracellular distribution of photosensitizing porphyrins measured by videoenhanced fluorescence microscopy, 355
Spectroscopic analysis of chlorophyll photobleaching in spinach thylakoids, grana and light-harvesting chlorophyll *a*/*b* protein complex, 483
Photobreakdown
Characterization of new furocoumarin derivatives by their dark and light-mediated action on RNA bacteriophage MS2, 209
Photochemotherapy
Pyrrolocoumarin derivatives: DNA-binding properties, 435
Photocurrent
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Photodynamic responses
Photo-orientation in a freshwater *Cryptomonas* species, 123
Photodynamic therapy
Fluorescence of hematoporphyrin in living cells and in solution, 195
Influence of medium polarity on the photosensitizing properties of hematoporphyrin and hematoporphyrin derivative (Photofrin II), 365
Laser flash photolysis of purpurins: novel potential photosensitizers of interest in photodynamic therapy, 427
Photoeffect
Characterization of new furocoumarin derivatives by their dark and light-mediated action on RNA bacteriophage MS2, 209
Photoelectrochemistry
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Photoexchange reactions
Photoexchange products of cytosine and 5-methylcytosine with N^{α}-acetyl-L-lysine and L-lysine, 265
Photohaemolysis
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109
Photomorphogenesis
The molecular topography of phytochrome: chromophore and apoprotein, 43
Photomovement
Photo-orientation in a freshwater *Cryptomonas* species, 123
Photo-oxidation
Light-induced transformations of hematoporphyrin diacetate and hematoporphyrin, 373
Photoproduct
Hematoporphyrin derivative photosensitization and cellular fluorescent photoproduct formation, 503
Light-induced transformations of hematoporphyrin diacetate and hematoporphyrin, 373
6–4 Photoproducts
Analysis of a photosensitive lesion induced by sunlamp UV > 315 nm exposure of 254-nm-irradiated human cells, 381
Photoreactivation
Photoreactivation in *phr* mutants of *Escherichia coli* K-12: cloning from the *gal-att*λ interval increases the photoreactivable response in *phrA* strains, 21
Photoreceptors
Blue light induces circadian rhythms in the *bd* mutant of neurospora: double mutants *bd,wc*-1 and *bd,wc*-2 are blind, 59
Photoredox
Photoexcitation of the methionine–iron bond in iron(III) cytochrome *c*: bimolecular reaction with NADH, 341
Photosensitive lesion
Analysis of a photosensitive lesion

induced by sunlamp UV > 315 nm exposure of 254-nm-irradiated human cells, 381
Photosensitization
Effect of hypocrellin A sensitization on the lateral mobility of cell membrane proteins, 395
Hematoporphyrin derivative photosensitization and cellular fluorescent photoproduct formation, 503
Influence of medium polarity on the photosensitizing properties of hematoporphyrin and hemato porphyrin derivative (Photofrin II), 365
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Recovery of Chinese hamster cells following photosensitization by zinc tetrahydroxyphthalocyanine, 243
Photosensitizers
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109
The nature of the chromophore responsible for naturally occurring fluorescence in mouse skin, 313
Photosensory transduction
Phototaxis of *Euglena gracilis* at low external calcium concentration, 443
Photosynthesis
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Photosystem II
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Phototaxis
Photo-orientation in a freshwater *Cryptomonas* species, 123
Phototaxis of *Euglena gracilis* at low external calcium concentration, 443
Phototherapy of psoriasis
The dose-response relationship for tumourigenesis by UV radiation in the region 311 - 312 nm, 179
Phototoxicity
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109
phrA mutants
Photoreactivation in *phr* mutants of *Escherichia coli* K-12: cloning from the *gal-att*λ interval increases the photoreactivable response in *phrA* strains, 21
Phthalocyanine
Recovery of Chinese hamster cells following photosensitization by zinc tetrahydroxyphthalocyanine, 243
Phytochrome
The molecular topogrpahy of phytochrome: chromophore and apoprotein, 43
Time characteristics of the interaction between phytochrome and the blue light photoreceptor system in *Mougeotia*, 467
Picosecond light sources
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Picosecond spectroscopy
Studies on biliprotein model compounds: cars, picosecond time-resolved absorption and emission spectroscopy of a tryptophan-substituted 2,3-dihydrobilatriene, 233
Polynucleotides
Binding of $Ru(bpy)_3^{2+}$ and $Ru(phen)_3^{2+}$ to polynucleotides and DNA: effect of added salts on the absorption and luminescence properties, 67
Porphyrin photosensitization
Intracellular distribution of photosensitizing porphyrins measured by video-enhanced fluorescence microscopy, 355
Potentially lethal damage
Recovery of Chinese hamster cells following photosensitization by zinc tetrahydroxyphthalocyanine, 243
Protoporphyrin
Light-induced redistribution and photobleaching of protoporphyrin in erythrocytes from patients with erythropoietic protoporphyria: an explanation of the rapid fading of fluorocytes, 33

Psoralen
Relative affinity of 5-methoxypsoralen and 8-methoxypsoralen towards β-cyclodextrin: a fluroescence, circular dichroism and chromatographic study, 455
Psoralen photochemistry
A new class of psoralen photoadducts to DNA components: isolation and characterization of 8-MOP adducts to the osidic moiety of 2′-deoxyadenosine, 321
Psoralens
Characterization of new furocoumarin derivatives by their dark and light-mediated action on RNA bacteriophage MS2, 209
Repair of the two *cis–syn* diastereoisomers formed between 3-carbethoxypsoralen and thymidine in yeast cells, followed by a chemical method, 389
Pyrimidine dimers
Effect of UV irradiation at defined wavelengths on the tertiary structure of double-stranded covalently closed circular DNA, 491
Pyrrolocoumarins
Photophysical, photochemical and photobiological properties of pyrrolocoumarins; a new class of photoactive compounds, 109
Pyrrolocoumarin derivatives: DNA-binding properties, 435
Purpurins
Laser flash photolysis of purpurins: novel potential photosensitizers of interest in photodynamic therapy, 427
PUVA
Repair of the two *cis–syn* diastereoisomers formed between 3-carbethoxypsoralen and thymidine in yeast cells, followed by a chemical method, 389

Raman scattering
Studies on biliprotein model compounds: cars, picosecond time-resolved absorption and emission spectroscopy of a tryptophan-substituted 2,3-dihydrobilatriene, 233
Recording methods
New trends in photobiology (Invited Review): time-resolved fluorescence in photobiology, 1
Red light
Time characteristics of the interaction between phytochrome and the blue light photoreceptor system in *Mougeotia*, 467
Rhodopsin
The photoreaction of vacuum-dried rhodopsin at low temperature: evidence for charge stabilization by water, 417
Ruthenium polypyridyl
Binding of $Ru(bpy)_3^{2+}$ and $Ru(phen)_3^{2+}$ to polynucleotides and DNA: effect of added salts on the absorption and luminescence properties, 67

Singlet oxygen
Laser flash photolysis of purpurins: novel potential photosensitizers of interest in photodynamic therapy, 427
Photo-orientation in a freshwater *Cryptomonas* species, 123
Skin cancer
The dose-response relationship for tumourigenesis by UV radiation in the region 311 - 312 nm, 179
Spectral curve analysis
Spectroscopic analysis of chlorophyll photobleaching in spinach thylakoids, grana and light-harvesting chlorophyll *a*/*b* protein complex, 483
Spinach thylakoids
Spectroscopic analysis of chlorophyll photobleaching in spinach thylakoids, grana and light-harvesting chlorophyll *a*/*b* protein complex, 483
Structure
The molecular topography of phytochrome: chromophore and apoprotein, 43
Sublethal damage
Recovery of Chinese hamster cells following photosensitization by zinc tetrahydroxyphthalocyanine, 243

Submembrane fraction
Properties of a photosystem II preparation in a photoelectrochemical cell, 221
Sunlamp UV
Analysis of a photosensitive lesion induced by sunlamp UV > 315 nm exposure of 254-nm-irradiated human cells, 381

Time-correlated single-photon counting
Fluorescence of hematoporphyrin in living cells and in solution, 195
Time-resolved fluorescences
Gigahertz frequency-domain fluorometry: resolution of complex decays, picosecond processes and future developments, 295
Triplet state
Influence of the gel–liquid phase transition on hematoporphyrin triplet deactivation in liposomes, 475
Triplet states
Laser flash photolysis of purpurins: novel potential photosensitizers of interest in photodynamic therapy, 427
Ts cells
Photoimmunology: the mechanisms involved in immune modulation by UV radiation, 149

UV
Effect of UV irradiation at defined wavelengths on the tertiary structure of double-stranded covalently closed cirular DNA, 491
Photoreactivation in *phr* mutants of *Escherichia coli* K-12: cloning from the *gal-att*λ interval increases the photoreactivable response in *phrA* strains, 21
UVB
The dose-response relationship for tumourigenesis by UV radiation in the region 311 - 312 nm, 179
UV radiation
Photoimmunology: the mechanisms involved in immune modulation by UV radiation, 149

Videomicroscopy
Photo-orientation in a freshwater *Cryptomonas* species, 123
Vitamin K
The mechanism of enzymically induced chemiluminescence reactions of lucigenin, 91

Yeast cells
Repair of the two *cis–syn* diastereoisomers formed between 3-carbethoxypsoralen and thymidine in yeast cells, followed by a chemical method, 389
